www.FightingAutism.org

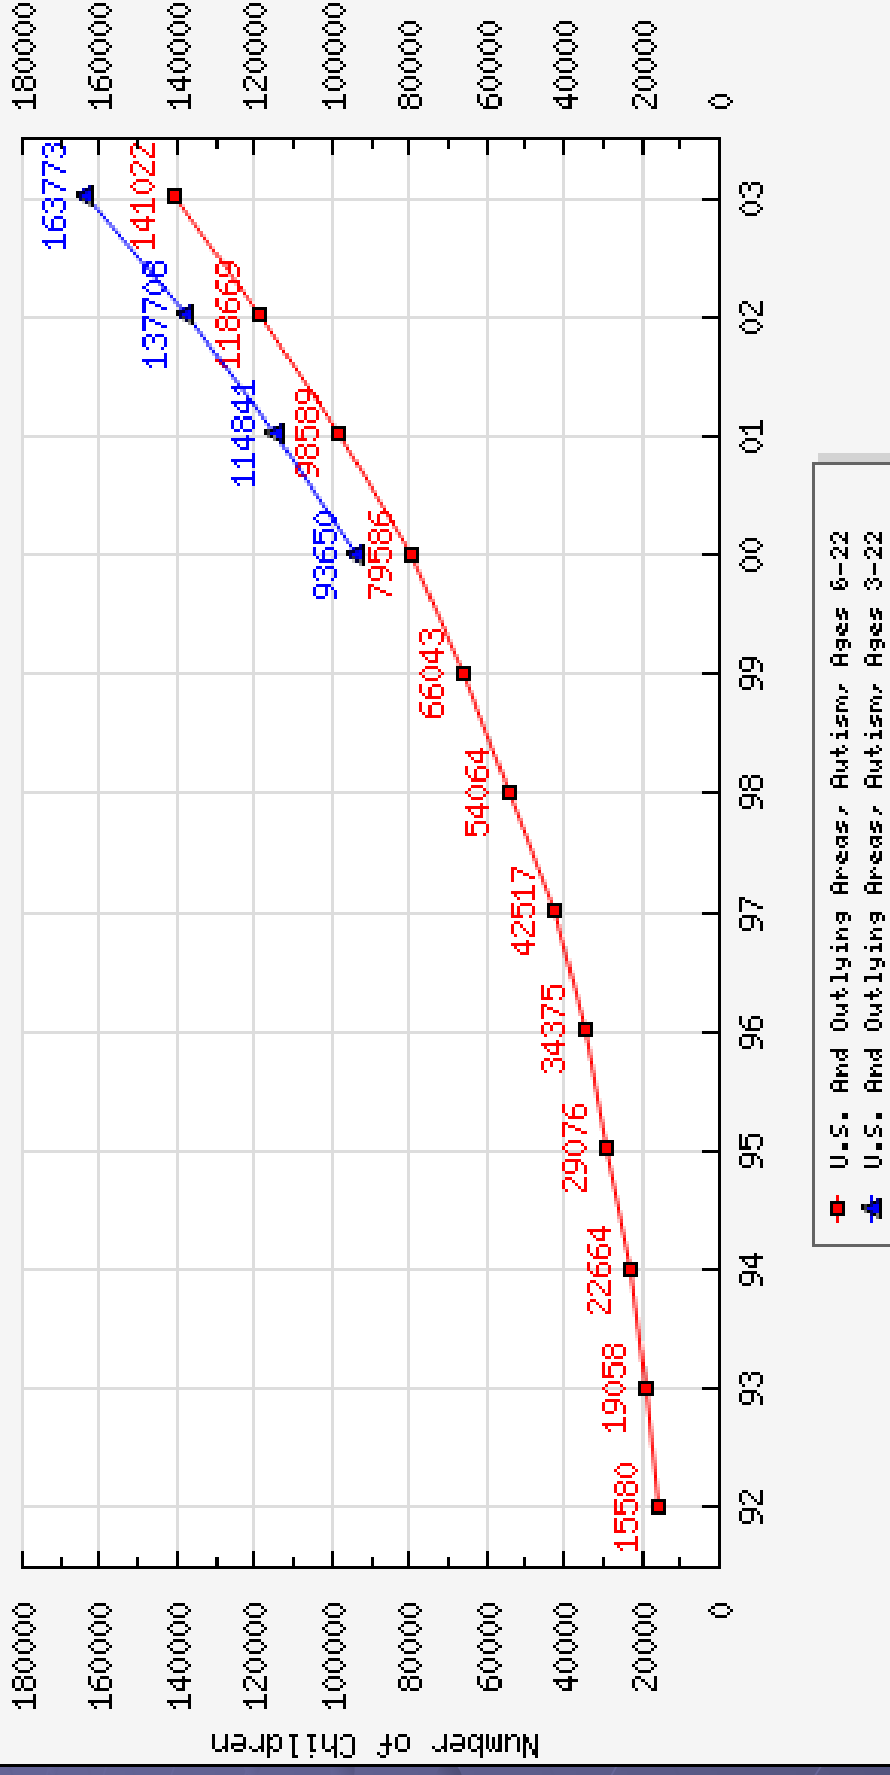

Before 1990 less than
20,000 children had
autism.

Since 1990 that figure
has increased tenfold.

Our children are
developing autism at an
alarming rate!

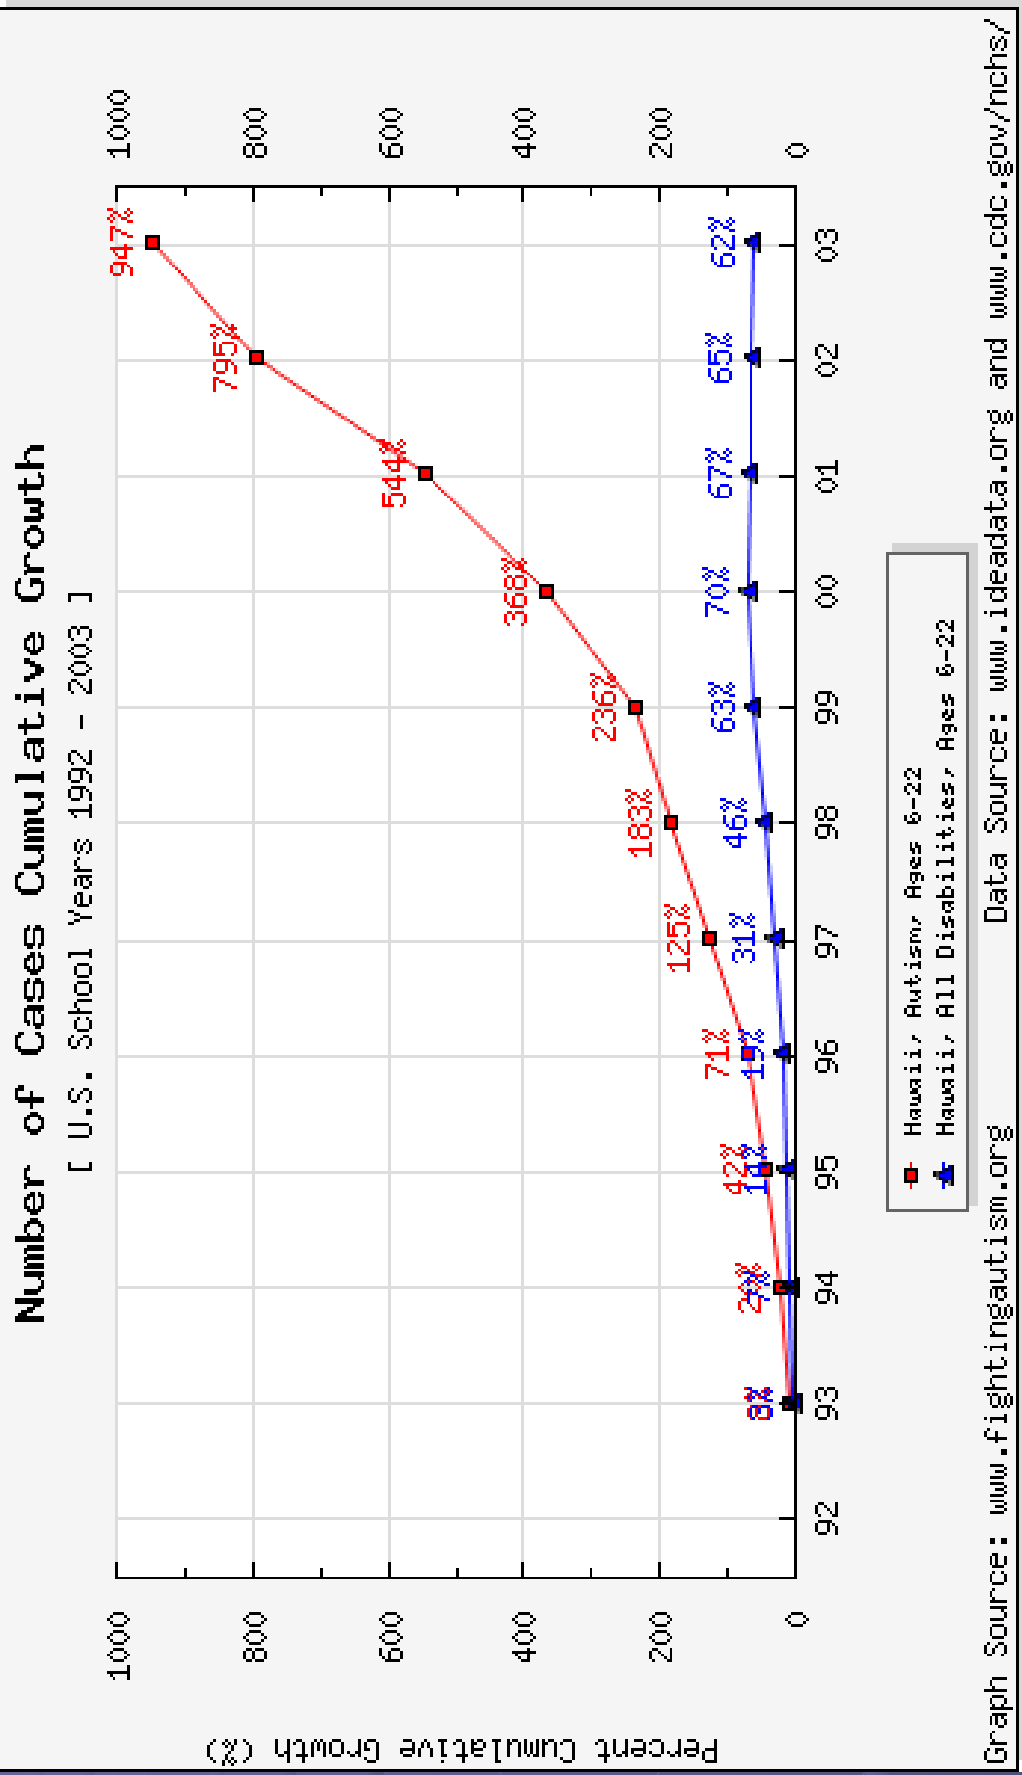

U.S. AUTISM ON THE RISE

Hawaii Autism Exceeds All Other Disabilities Combined!

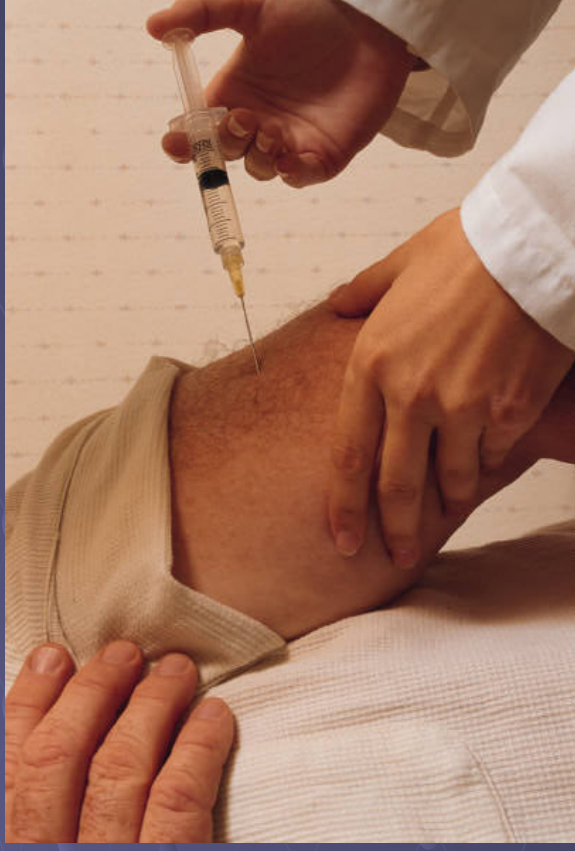

Symptoms of Autism

AUTISM	
Motor Skills and Movement Disorders	Uncoordinated; clumsiness; rocking; circling; flaps arms; walks on toes; difficulty with walking, sitting, crawling; difficulty with swallowing or chewing
Sensory Disorders	Oversensitive to sound; does not like to be touched; abnormal sensations in mouth, arms and legs
Speech, Hearing & Language Development	Delayed language or failure to develop speech; problems with articulation; mild to severe hearing loss; word use errors
Cognitive Ability	Borderline intelligence; mental retardation (may be reversed); poor concentration and attention; difficulty following complex commands; difficulty with word comprehension; difficulty with understanding abstract ideas and symbols
Physical Characteristics and Functional Disturbances	Weakening muscle strength, especially upper body; rash, dermatitis; abnormal sweating; poor circulation and high heart rate; diarrhea, constipation, abdominal discomfort and incontinence; anorexia; seizures; tendency to have allergies and asthma; family h
Behavior	Difficulty sleeping; staring and unprovoked crying; injures self (such as head banging); social isolation
Visual Problems	Poor eye contact; blurred vision

PROTECTING OUR KEIKI

Every day trusting parents in the United States and Hawaii vaccinate their children based on doctors recommendations to prevent diseases such as measles, mumps, rubella, tetanus, diphtheria, etc.

We have no such vaccination for autism.

HISTORY OF VACCINATIONS

During the 1970's and 80's, the federal government established goals for improving vaccination rates.

Federal grants were offered to states encouraging state mandates for forced vaccination.

During this time period, the number of mandated vaccines gradually increased from 8 to 30 vaccinations by 2000.

HISTORY OF AUTISM DEVELOPMENT

Autism typically develops around 18 months of age.

After the development of mandated vaccinations autism crossed class lines.

Today autism is widespread in all socioeconomic groups.

IS MERCURY IN VACCINATIONS TO BLAME?

1979 - Mercury-containing MMR was added to the vaccine schedule.

1988 - Mercury-containing HIB vaccine was added.

1990 - Mercury-containing Hepatitis B for newborns was added.

DTP - Still contains mercury and is given 3 – 4 times during childhood.

Vaccines are usually administered simultaneously making the dose of mercury much higher.

Symptoms of Mercury Poisoning

MERCURY POISONING	
Motor Skills and Movement Disorders	Uncoordinated; clumsiness; rocking; circling; flaps arms; walks on toes; difficulty with walking or sitting; difficulty with swallowing or chewing
Sensory Disorders	Oversensitive to sound; does not like to be touched; abnormal sensations in mouth, arms and legs
Speech, Hearing & Language Development	Loss of speech or failure to develop speech; problems with articulation; mild to severe hearing loss; word retrieval problems
Cognitive Ability	Borderline intelligence; mental retardation (may be reversed); poor concentration & attention; difficulty following complex commands; difficulty with word comprehension; difficulty with understanding abstract ideas and symbols
Physical Characteristics and Functional Disturbances	Weakening muscle strength, especially upper body; rash, dermatitis; abnormal sweating; poor circulation and high heart rate; diarrhea, constipation, abdominal discomfort and incontinence; anorexia; seizures; tendency to have allergies and asthma; more lik
Behavior	Difficulty sleeping; staring and unprovoked crying; injures self (such as head banging); social isolation
Visual Problems	Poor eye contact; blurred vision

Are We Hurting the Children?

	AUTISM	MERCURY POISONING
Motor Skills and Movement Disorders	Uncoordinated; clumsiness; rocking; circling; flaps arms; walks on toes; difficulty with walking, sitting, crawling; difficulty with swallowing or chewing	Uncoordinated; clumsiness; rocking; circling; flaps arms; walks on toes; difficulty with walking or sitting; difficulty with swallowing or chewing

THIMEROSAL & AUTISM

Under independent investigation, the National Autism Association reported, of the **CDC's data** children were found to be **27-times more likely to develop autism** after exposure to three thimerosal-containing vaccines (TCVs), than those who receive thimerosal-free versions.”

NEW DEATH BY SIDS

“Crib death was so infrequent in the pre-vaccination era that it was not even mentioned in the statistics, but it started to climb in the 1950s with the spread of mass vaccination against diseases of childhood.

It became a matter of public and professional concern and even acquired a new name, “sudden infant death of unknown origin, or, for short, SIDS.”

<http://www.vaccinationnews.com/Rally/Sids&VaxCoult.htm>

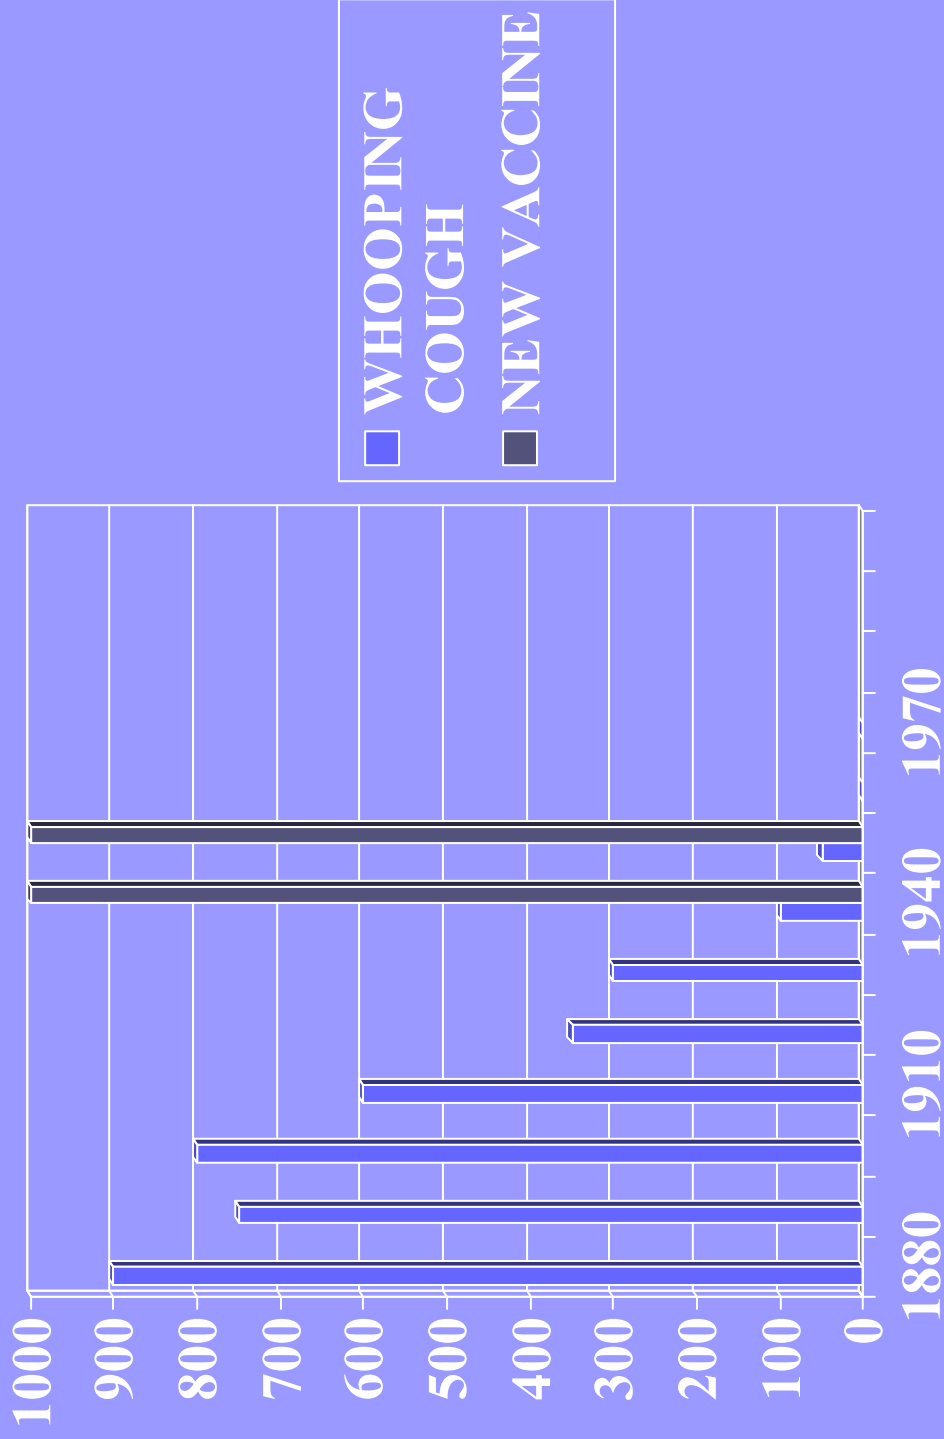

“Japan changed the start time for vaccinating from 3 months to two years and straight away their SIDS rate plummeted.”

http://www.shirleys-wellness-cafe.com/vaccine_sids.htm

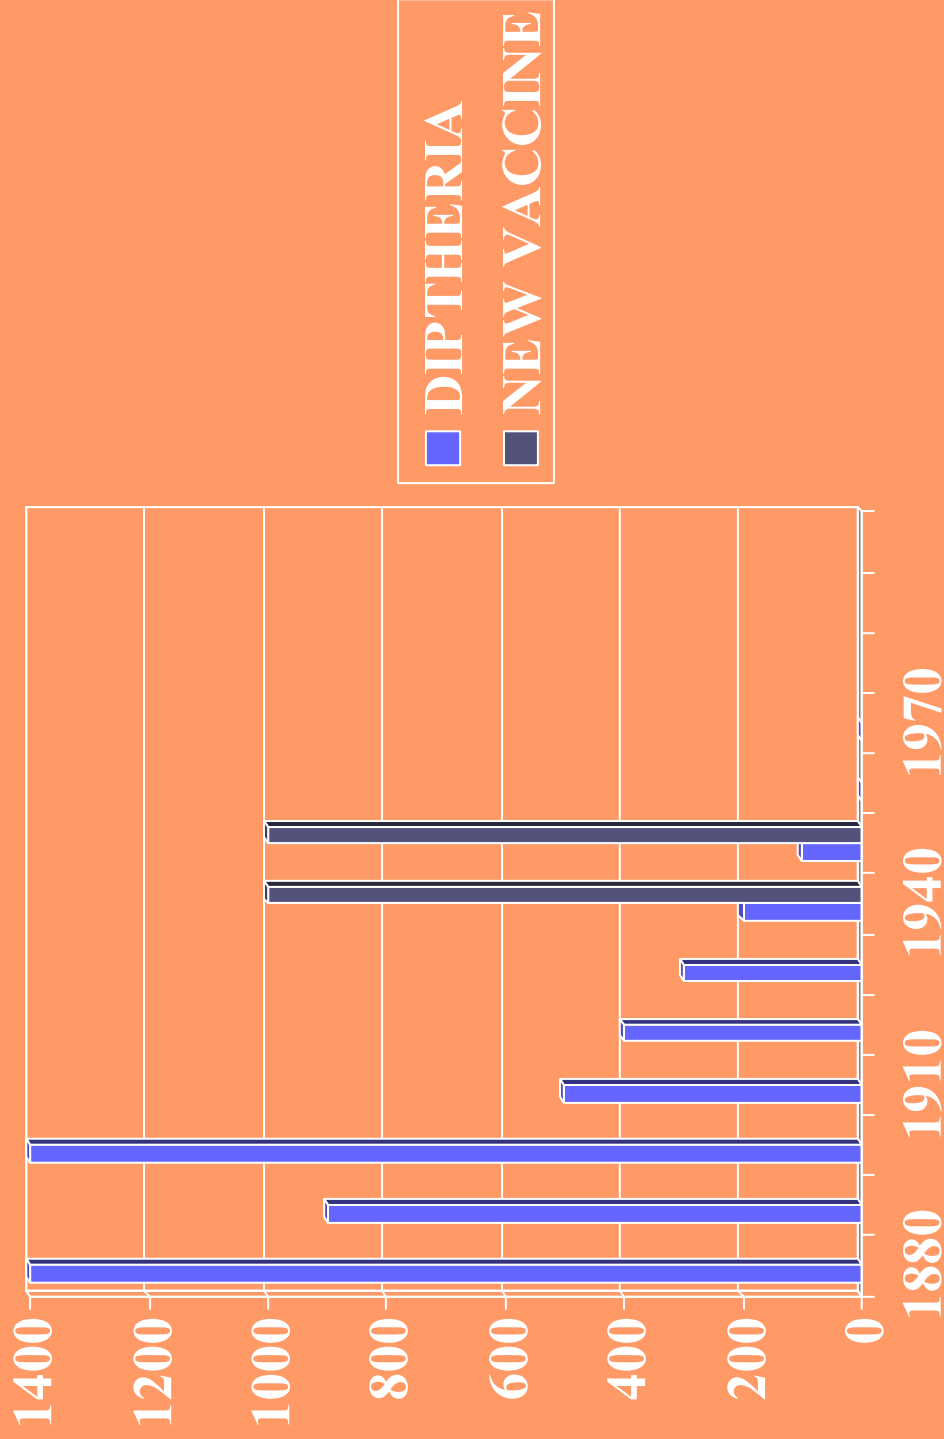

What Else is in Vaccinations?

Vaccine Ingredient	Safety Concerns
Formaldehyde	No amount safe for human exposure
Antifreeze	Harmful or Fatal if Swallowed
Aluminum	On 2 Federal Regulatory Lists
2-Phenoxyethanol	Metabolic Poison, Developmental Effects, Reproductive Toxin.
Phenol	
Methanol	Volatile, Flammable, and Poisonous
Borax	A pesticide
Glutaraldehyde	Poisonous if Ingested, Birth Defects
MSG	Allergen
Sulfate and Phosphate Compounds	Epilepsy, Mental Retardation, Neuroxicant
Polymyxin B	Antibiotic
Polysorbate 20/80	Cancer
Amphotericin B	Blood Clots, Blood Defects, Kidney Disease
Animal Organ Tissue and Blood	Contains many animal viruses.
Aborted Human Fetal Tissue	Abortion Rights Concern
Large Foreign Proteins	Toxic to the body when injected producing sensitization, not immunity.
Latex	Life-threatening Allergic Reactions
Animal Viruses	Alien to the Human Body
Human Viruses	Some Take Ill
Bacteria and their Toxins	Weakens the Immune System
Mycoplasma	Causes Pneumonia
Genetically Modified Yeast	Controversial
Foreign DNA	Shown to be incorporated into human DNA changing our genetic makeup

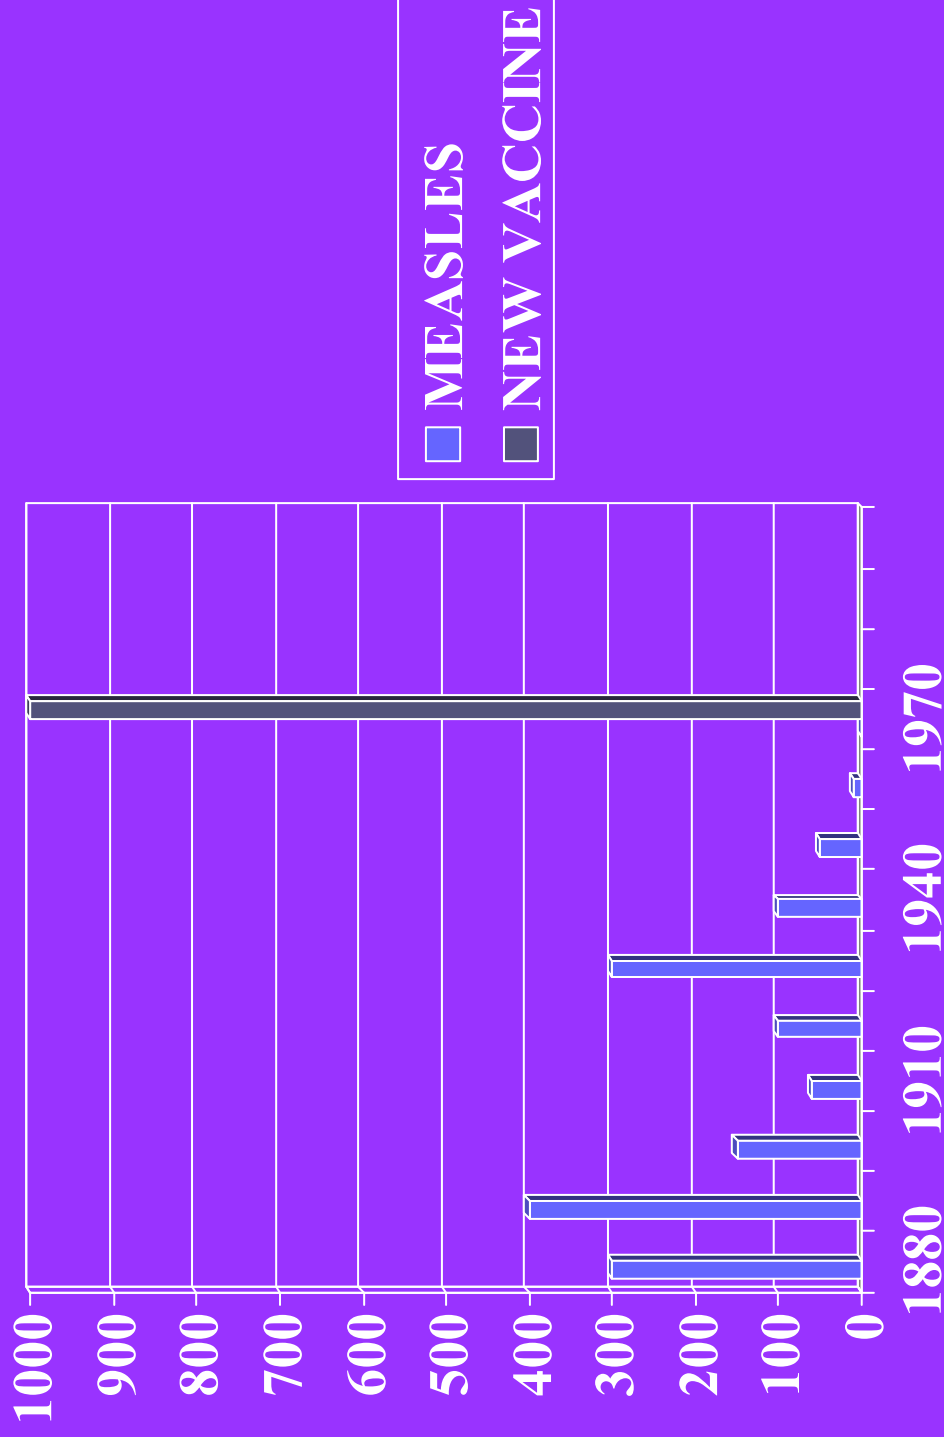

Do Vaccines Really Work???

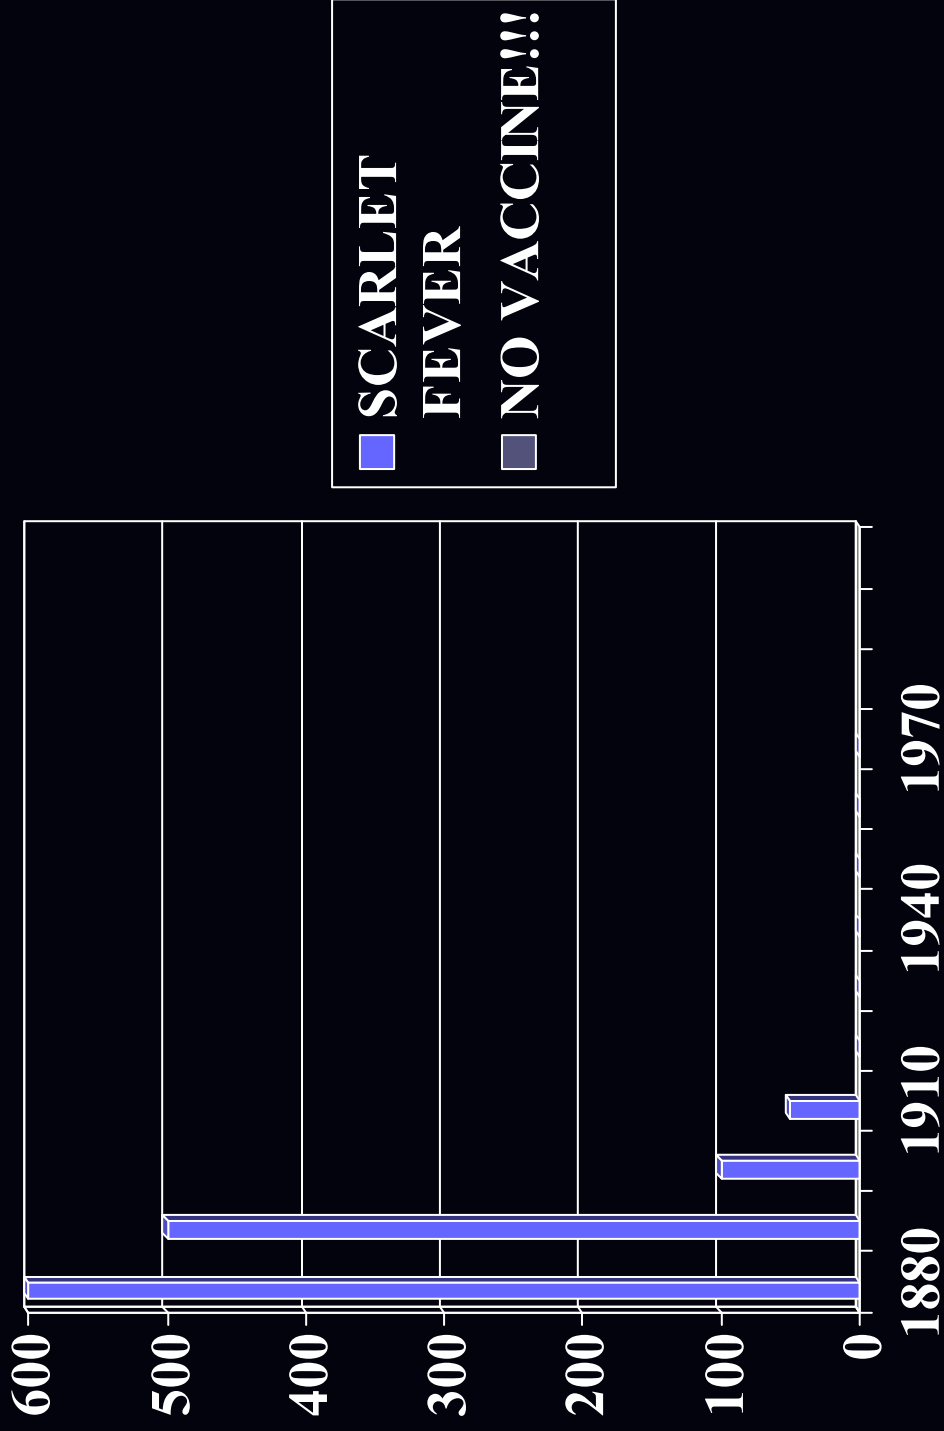

Do Vaccines Really Work???

Do Vaccines Really Work???

Do Vaccines Really Work???

Why the Cover-up?

There is money to be made by doctors and Big Pharma in vaccines!

Doctor's see your single child as a casualty to protect many(including their finances). You may not feel the same way!

Doctor's would be ostracized by money hungry peers for speaking up!

Doctor's would face loss of licensure due to state and insurance regulations created by states to obtain federal grant monies!

Did I mention MONEY???

What Can You Do to Protect Your Child?
